

# Digital Preservation Metadata and Improvements to PREMIS in Version 3.0

**Angela Dappert**  
University of Portsmouth

# Agenda

---

- ▶ Digital preservation metadata
  - ▶ Why is it needed and what does it look like?
- ▶ PREMIS
  - ▶ What is it?
  - ▶ Data model
  - ▶ How to use it
- ▶ From V2 to V3

# Agenda

---

- ▶ Digital preservation metadata
  - ▶ Why is it needed and what does it look like?
- ▶ PREMIS
  - ▶ What is it?
  - ▶ Data model
  - ▶ How to use it
- ▶ From V2 to V3

# What is digital preservation metadata?

---

- ▶ Digital preservation metadata =  
metadata that is considered necessary  
to ensure long-term accessibility  
of digital resources
- ▶ Digital objects must be self-descriptive
- ▶ Must be able to exist independently from the systems  
which were used to create them  
XML (machine and human readable)

# DP metadata supports preservation goals

Preservation Pyramid  
(from Priscilla Caplan)

# Domain

---

# Technology dependence

---

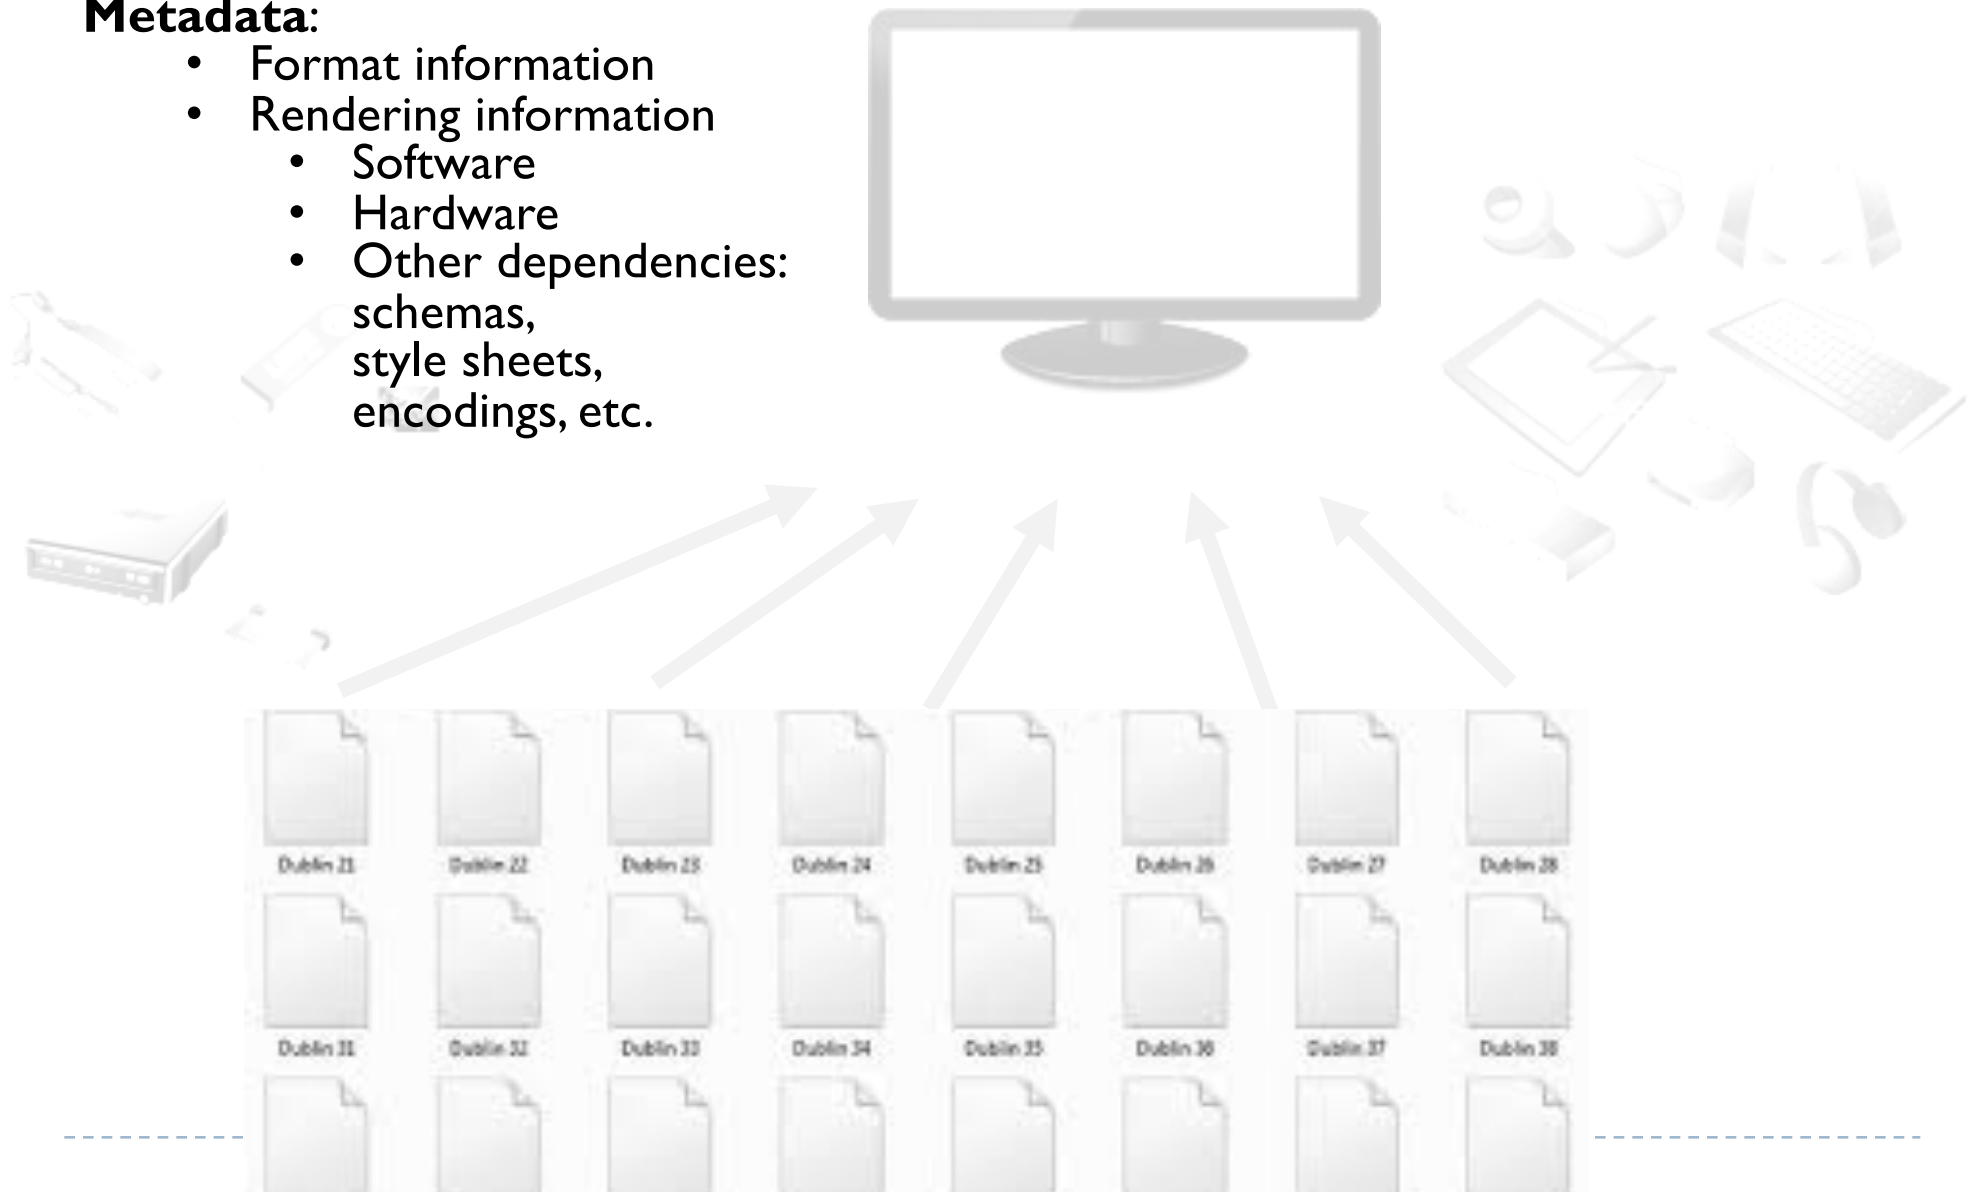

# Technology dependence

---

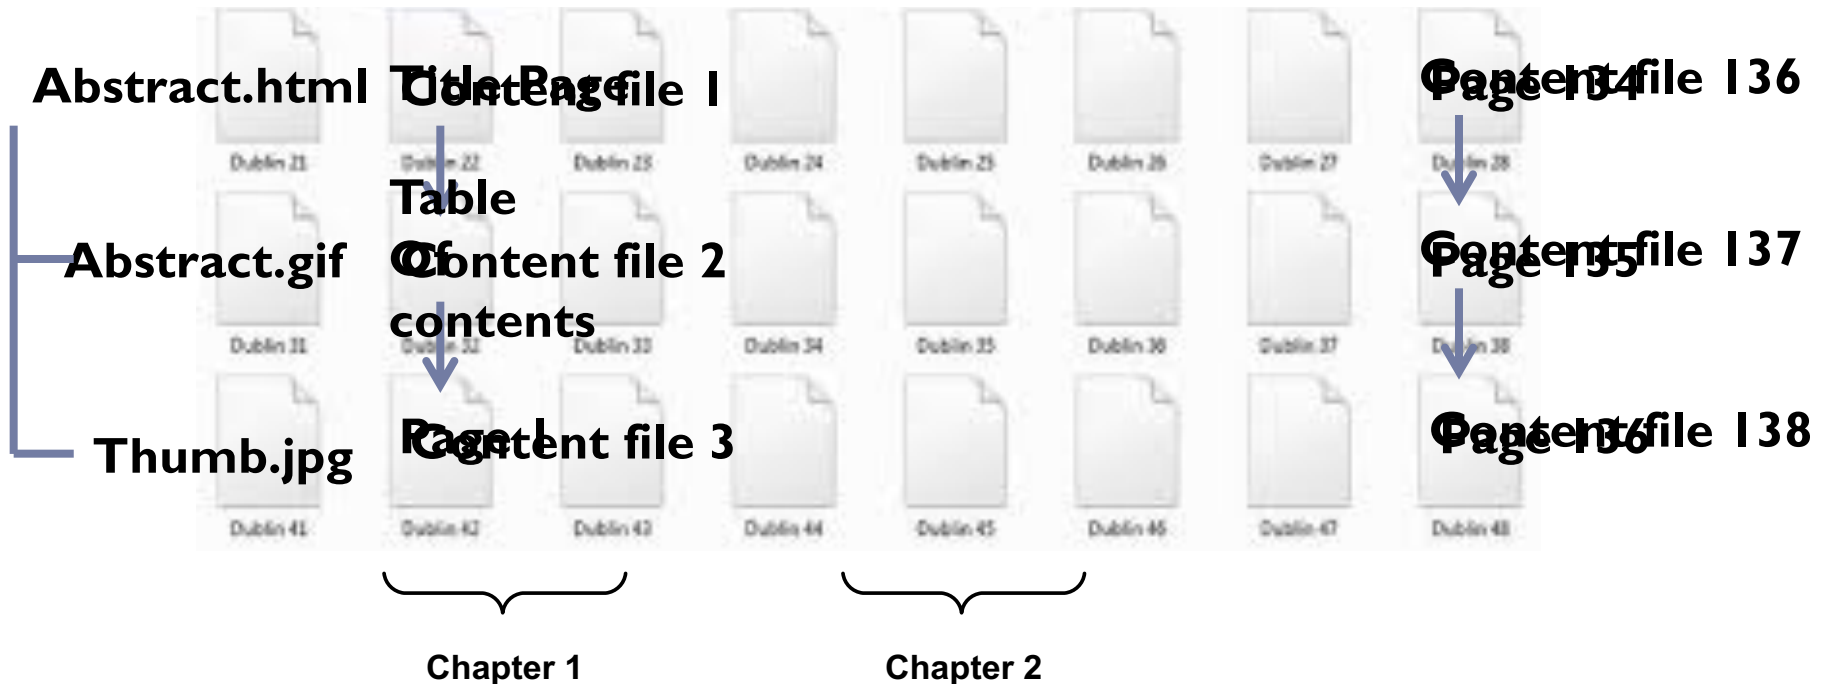

## Metadata:

- Format information
- Rendering information
  - Software
  - Hardware
  - Other dependencies: schemas, style sheets, encodings, etc.

# Complex structures

## Metadata

- Physical structural relationships
  - Embedded files
  - File sequence
- Logical structural relationships

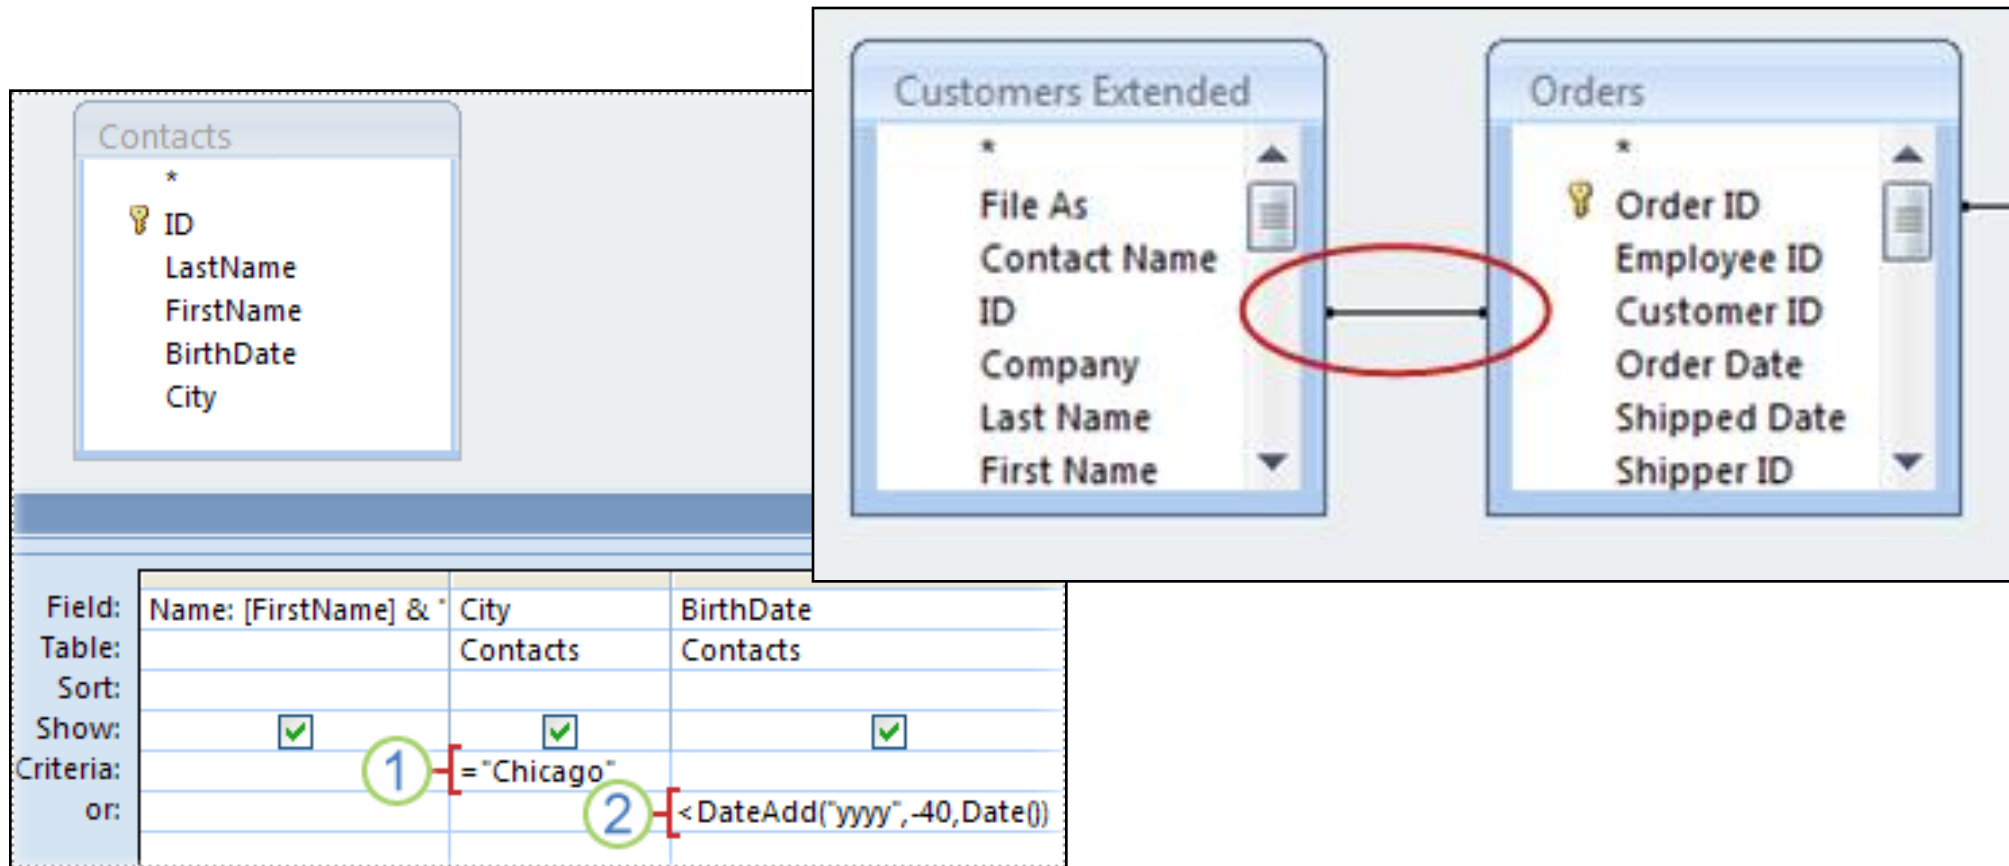

# Supporting features

## Metadata:

Semantic information for the designated community

# Supporting features

## Metadata:

Semantic information for the designated community

# Obsolescence

---

-> object transformations

## Support

- ▶ Pre-emptive preservation actions
  - ▶ Bit migration
  - ▶ Content migration
- ▶ Forensic transformation actions

# Obsolescence / object transformations

---

## Goals

- ▶ Avoid rights violations
- ▶ Prove authenticity
  - ☐ Events
  - ☐ Changes and decisions
  - ☐ Agents (decision maker + tools used)
  - ☐ Dates

## Metadata

- ▶ Rights information for preservation actions during copyright / license period
- ▶ Provenance metadata:
  - ▶ History of all actions performed on the resource
  - ▶ History of custodianship

# Obsolescence / object transformations

---

## Goals

- ▶ Demonstrate degree of authenticity
- ▶ Manage potential loss of object characteristics
- ▶ Explain descisions
  - ❑ Documentation

## Metadata

- ▶ Significant characteristics = business requirement
- ▶ Technical and content characteristics of objects before and after preservation actions
- ▶ Business rules guiding preservation actions

# Mutability

- ▶ Intentional or accidental change
  - ▶ Decay: rapid and potentially complete
- 

## Goals

- ▶ Viability: the object is readable
- ▶ Fixity: the object is unchanged

## Metadata

- ▶ Data carrier metadata
  - ▶ Type of medium
  - ▶ Its preservation characteristics
  - ▶ Age of medium
  - ▶ Date of recording
  - ▶ Usage patterns
- ▶ Checksums, message digests
- ▶ Event creating them
  - ▶ Hash algorithms creating them
  - ▶ Date/time
  - ▶ Originator

# Mutability

- ▶ Intentional or accidental change
  - ▶ Decay: rapid and potentially complete
- 

## Goals

- ▶ Integrity: the object is whole and unimpaired
- ▶ Authenticity: the object is what it purports to be

## Metadata

- ▶ Event information for format identification and validation events (= provenance)
- ▶ Structural metadata
- ▶ Provenance metadata
- ▶ Digital signatures
- ▶ Access rights

# Context descriptions

---

## Metadata:

### Context descriptions

- Original source
- Related items (e.g. migration source)

# Agenda

---

- ▶ Digital preservation metadata
  - ▶ Why is it needed and what does it look like?
- ▶ PREMIS
  - ▶ What is it?
  - ▶ Data model
  - ▶ How to use it
- ▶ From V2 to V3

# The PREMIS standard

---

- ▶ International standard for metadata to support the preservation of digital objects and ensure their long-term usability.
  - ▶ Information you need to know for preserving digital documents

*Preservation Metadata: Implementation Strategies*
- ▶ Developed by an international team of experts.
- ▶ Implemented in digital preservation projects around the world.
- ▶ Incorporated into commercial and open-source digital preservation tools and systems.

# The PREMIS standard

- ▶ Data Dictionary (PREMIS 2.2)
  - ▶ <http://www.loc.gov/standards/premis/v2/premis-2-2.pdf>
  - ▶ Version 3 will be released this summer – major release
- ▶ XML schema
- ▶ OWL ontology
- ▶ Supporting documentation

# Activities

---

- ▶ The PREMIS Editorial Committee
  - ▶ Coordinates revisions and implementation of the standard
- ▶ PREMIS Implementors' Group forum (pig@loc.gov)
  - ▶ Email message to [listserv@loc.gov](mailto:listserv@loc.gov):  
Text: subscribe pig <your name>
- ▶ PREMIS Implementation Fair (PIF)
  - ▶ User group meetings (@iPres)

# Scope

---

- ▶ **What PREMIS DD is:**
  - ▶ Common data model for organizing/thinking about preservation metadata
  - ▶ Implementable
  - ▶ Standard for exchanging information packages between repositories
  - ▶ Technically neutral
  - ▶ Core metadata

# Scope

---

- ▶ **What PREMIS DD is not:**
  - ▶ Out-of-the-box solution
  - ▶ All needed metadata
  - ▶ Lifecycle management of objects outside repository
  - ▶ Rights management

# Agenda

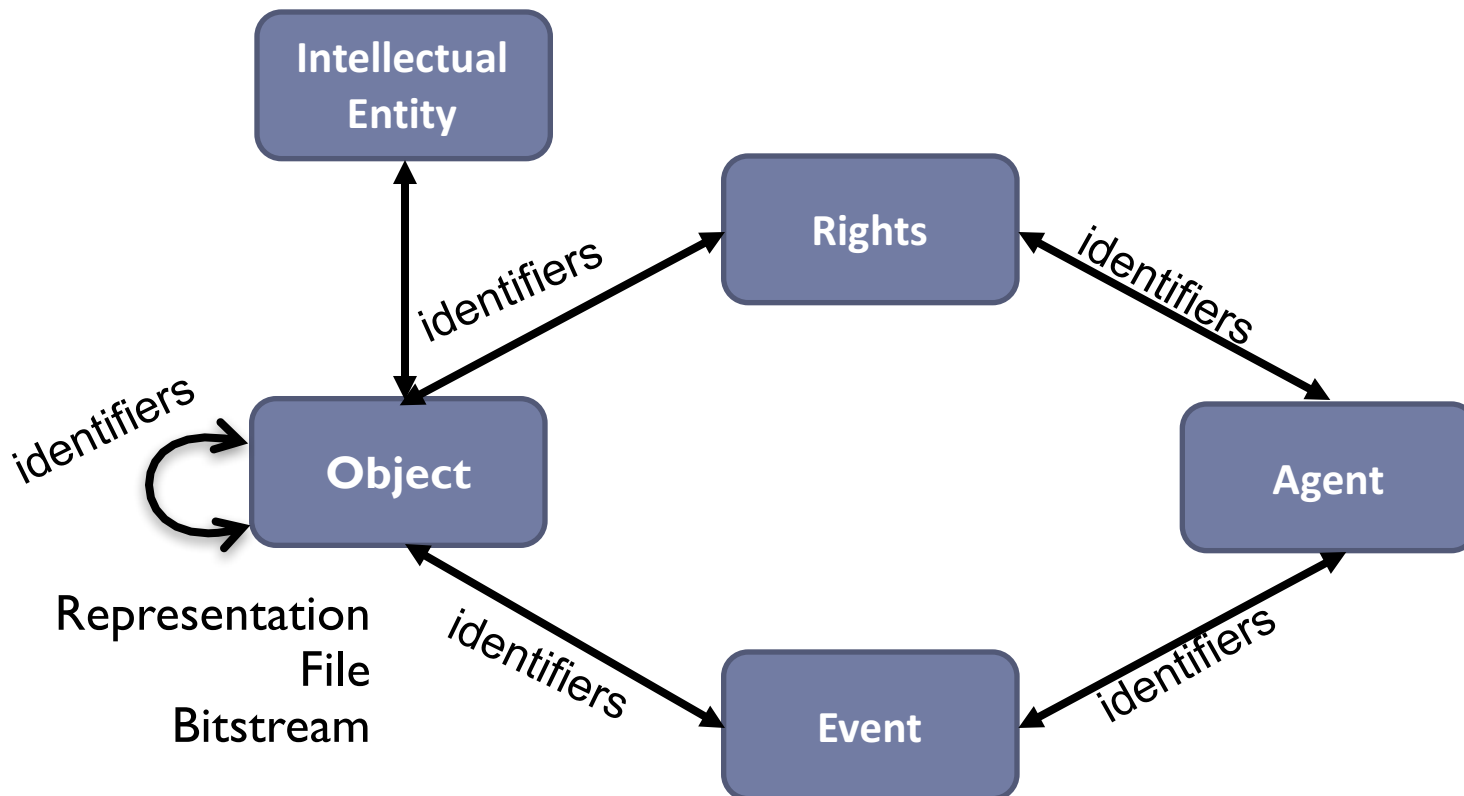

---

- ▶ Digital preservation metadata
  - ▶ Why is it needed and what does it look like?
- ▶ PREMIS
  - ▶ What is it?
  - ▶ Data model
  - ▶ How to use it
- ▶ From V2 to V3

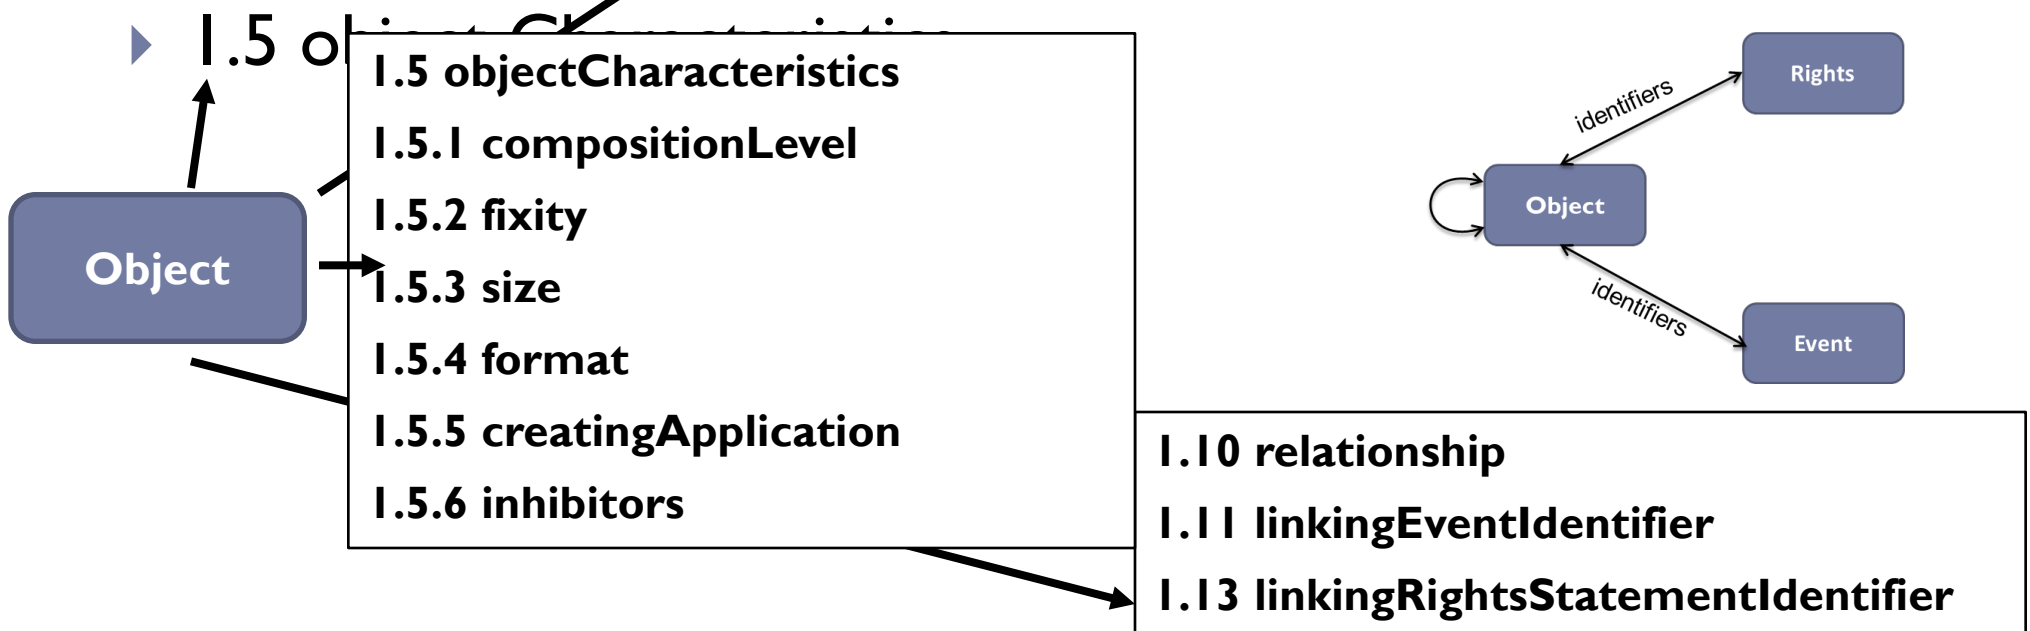

# Data Model in PREMIS Version 2

- ▶ Entities: “things” relevant to digital preservation that are described by preservation metadata
- ▶ Relationships between Entities ↔
- ▶ Properties of Entities (semantic units)

# Example: Object Entity semantic units

- ▶ 1.1 object Identifier
- ▶ 1.2 object Category
- ▶ 1.3 preservation Level
- ▶ 1.4 significant Properties
- ▶ 1.5 object Characteristics
- ▶ 1.6 original Name
- ▶ 1.7 storage
- ▶ 1.8 environment
- ▶ 1.9 signature Information

# Sample Data Dictionary Entry

---

**1.5 objectCharacter**  
**1.5.1 compositionL**  
**1.5.2 fixity**  
**1.5.3 size** →  
**1.5.4 format**  
**1.5.5 creatingApplic**  
**1.5.6 inhibitors**

<b>Semantic unit</b>	size		
<b>Semantic components</b>	None		
<b>Definition</b>	The size in bytes of the file or bitstream stored in the repository.		
<b>Rationale</b>	Size is useful for ensuring the correct number of bytes from storage have been retrieved and that an application has enough room to move or process files. It might also be used when billing for storage.		
<b>Data constraint</b>	Integer		
<b>Object category</b>	<b>Representation</b>	<b>File</b>	<b>Bitstream</b>
<b>Applicability</b>	Not applicable	Applicable	Applicable
<b>Examples</b>		2038927	
<b>Repeatability</b>		Not repeatable	Not repeatable
<b>Obligation</b>		Optional	Optional
<b>Creation/ Maintenance notes</b>	Automatically obtained by the repository.		
<b>Usage notes</b>	Defining this semantic unit as size in bytes makes it unnecessary to record a unit of measurement. However, for the purpose of data exchange the unit of measurement should be stated or understood by both partners.		

# Agenda

---

- ▶ Digital preservation metadata
  - ▶ Why is it needed and what does it look like?
- ▶ PREMIS
  - ▶ What is it?
  - ▶ Data model
    - ▶ How to use it
- ▶ From V2 to V3

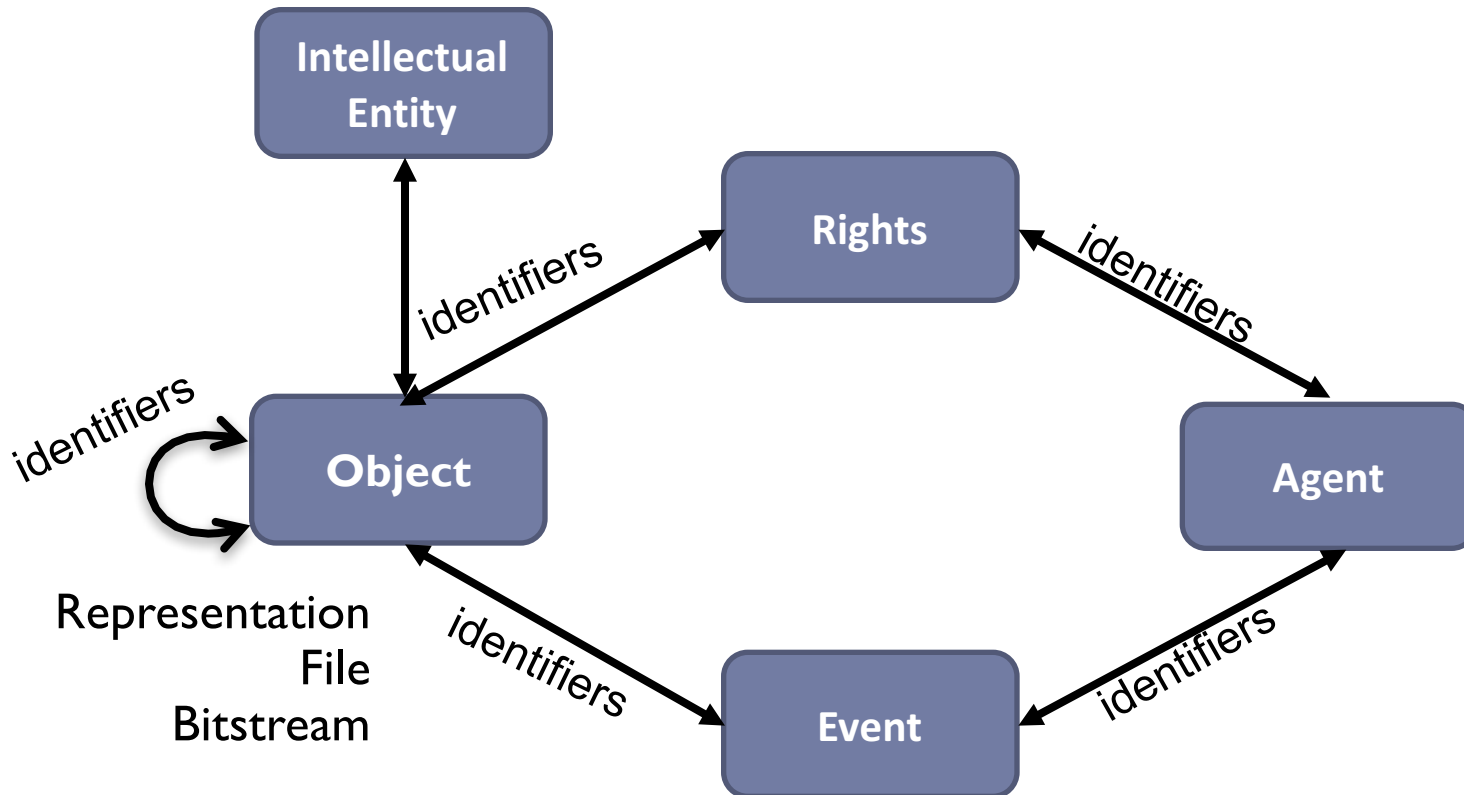

# Tayloring PREMIS to needs

---

- ▶ Increasing experience ensuring the longevity of digital objects
- ▶ Changing future technical possibilities
- ▶ Changing future legal framework
- ▶ Tayloring solutions from core metadata
  - ▶ Varying needs
    - ☐ Content-types
    - ☐ Institutional policies
    - ☐ Intended use

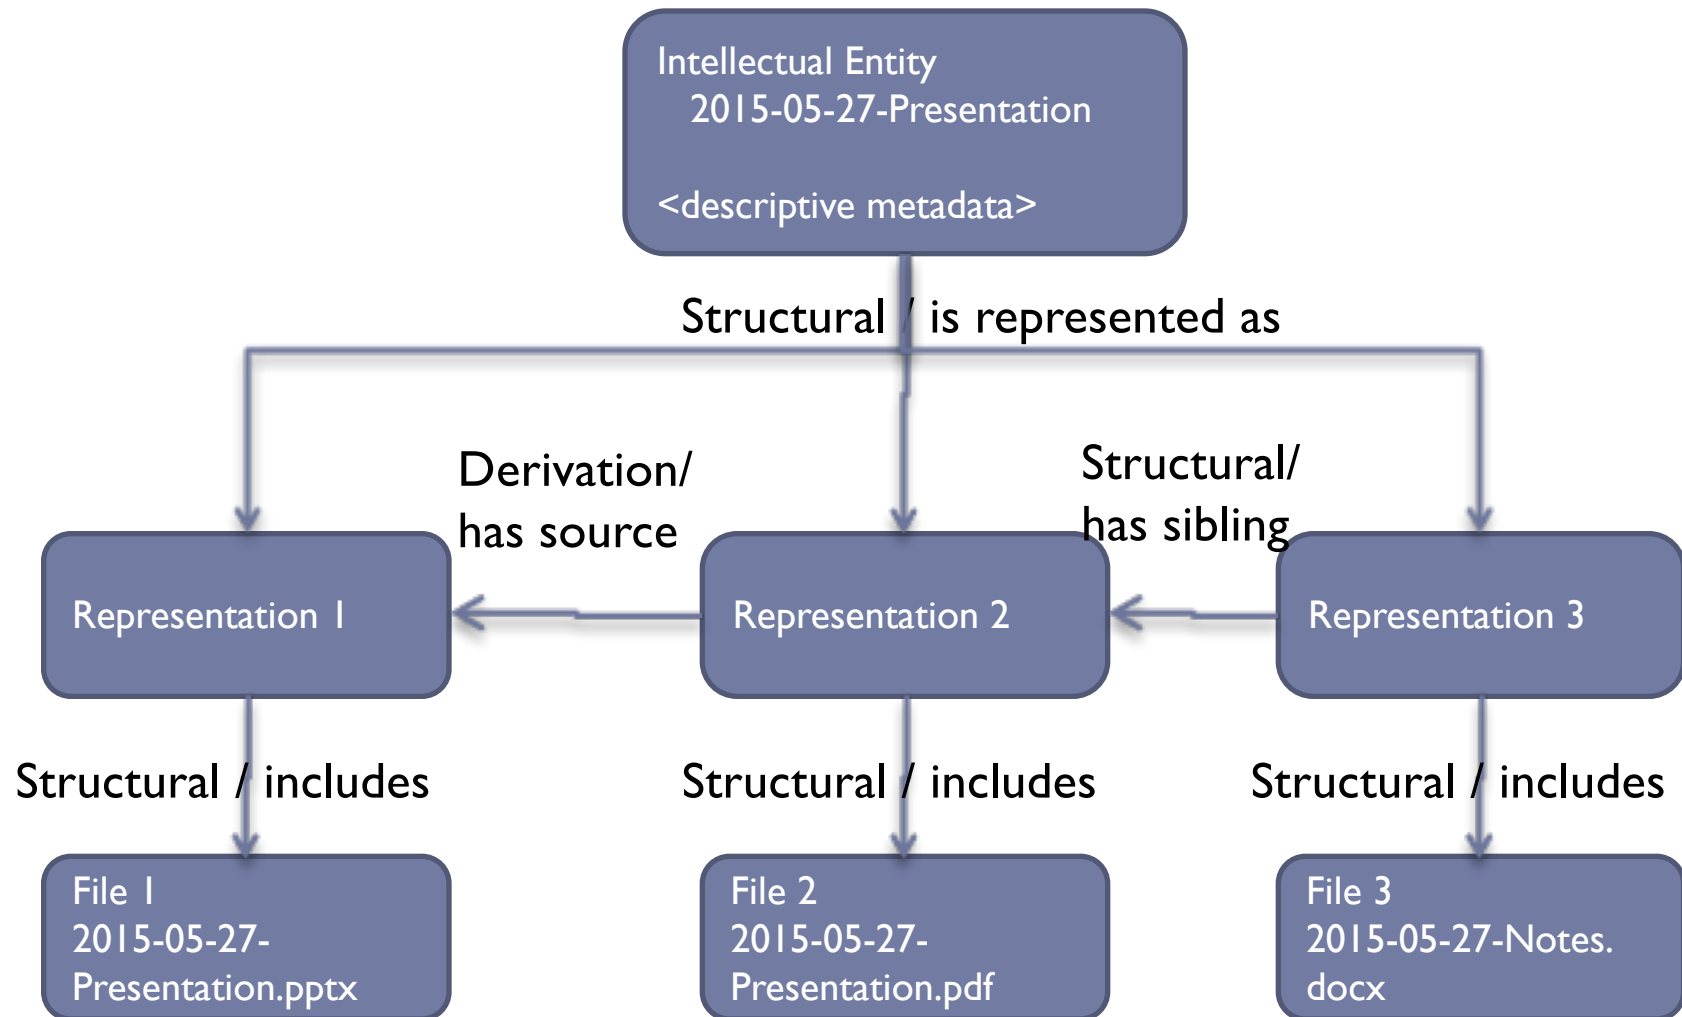

# From here to an implementation ...

# Tayloring PREMIS to needs

---

- ▶ We cannot know for sure
  - ▶ Increasing experience ensuring the longevity of digital objects
  - ▶ Changing future technical possibilities
  - ▶ Changing future legal framework
- ▶ Tayloring solutions from core metadata
  - ▶ Varying needs
    - ☐ Content-types
    - ☐ Institutional policies
    - ☐ Intended use
  - ▶ Off-the-shelf (OS / commercial ) or custom-built

# Agenda

---

- ▶ Digital preservation metadata
  - ▶ Why is it needed and what does it look like?
- ▶ PREMIS
  - ▶ What is it?
  - ▶ Data model
  - ▶ How to use it
- ▶ From V2 to V3

# PREMIS: From V2 to V3

---

- ▶ Next major version of the PREMIS Data Dictionary
- ▶ Released by July 2015
- ▶ Still in proof-reading phase

# PREMIS: From V2 to V3

---

- ▶ Improving PREMIS based on user needs
  - ▶ Add preservationLevelType semantic unit
  - ▶ Add agentVersion semantic unit
  - ▶ Add eventDetailInformation semantic unit
  - ▶ Add “unknown” values
  - ▶ Add authority for controlled vocabulary
  - ▶ Make Intellectual Entity an Object category
  - ▶ Make Environments independent Objects
  - ▶ Add physical Objects
  - ▶ Update conformance statement
- 
- Diagram illustrating the categorization of PREMIS V3 changes:
- minor**: Add preservationLevelType semantic unit, Add agentVersion semantic unit, Add eventDetailInformation semantic unit, Add “unknown” values
  - bonus**: Add authority for controlled vocabulary
  - major**: Make Intellectual Entity an Object category, Make Environments independent Objects, Add physical Objects
  - clarification**: Update conformance statement

# Approved Changes:

## Add preservationLevelType semantic unit

---

- ▶ 1.3 preservationLevel
- ▶
- ▶ 1.3.1 preservationLevelValue
- ▶ 1.3.2 preservationLevelRole
- ▶ 1.3.3 preservationLevelRationale
- ▶ 1.3.4 preservationLevelDateAssigned

# Approved Changes:

## Add preservationLevelType semantic unit

---

- ▶ 1.3 preservationLevel
  - ▶ 1.3.1 preservationLevelType
  - ▶ 1.3.2 preservationLevelValue
  - ▶ 1.3.3 preservationLevelRole
  - ▶ 1.3.4 preservationLevelRationale
  - ▶ 1.3.5 preservationLevelDateAssigned
- ▶ Associate type of preservation function with preservation level.

# Approved Changes:

## Add agentVersion semantic unit

---

- ▶ If agentType is software,
  - ▶ agentVersion can be used to refine agentName.
- ▶ 3.1 agentIdentifier
- ▶ 3.2 agentName
- ▶ 3.3 agentType
- ▶ 3.4 agentNote
- ▶ 3.5 agentExtension
- ▶ 3.6 linkingEventIdentifier
- ▶ 3.7 linkingRightsStatementIdentifier
- ▶

# Approved Changes:

## Add agentVersion semantic unit

---

- ▶ If agentType is software,
  - ▶ agentVersion can be used to refine agentName.
  
- ▶ 3.1 agentIdentifier
- ▶ 3.2 agentName
- ▶ 3.3 agentType
- ▶ 3.4 agentVersion
- ▶ 3.5 agentNote
- ▶ 3.6 agentExtension
- ▶ 3.7 linkingEventIdentifier
- ▶ 3.8 linkingRightsStatementIdentifier
- ▶ 3.9 linkingEnvironmentIdentifier

# Approved Changes:

## Add eventDetailInformation semantic unit .

---

- ▶ 2.1 eventIdentifier
- ▶ 2.2 eventType
- ▶ 2.3 eventDateTime
- ▶ 2.4 eventDetail
- ▶ 2.5 eventOutcomeInformation
- ▶ 2.6 linkingAgentIdentifier
- ▶ 2.7 linkingObjectIdentifier

# Approved Changes:

Add eventDetailInformation semantic unit .

---

- ▶ 2.1 eventIdentifier
- ▶ 2.2 eventType
- ▶ 2.3 eventDateTime
- ▶ 2.4 eventDetailInformation
  - ▶ 2.4.1 eventDetail
  - ▶ 2.4.2 eventDetailExtension
- ▶ 2.5 eventOutcomeInformation
- ▶ 2.6 linkingAgentIdentifier
- ▶ 2.7 linkingObjectIdentifier

# Approved Changes:

## Unknown compositionLevel and format

---

compositionLevel and format:

- ▶ A value of *unknown* added if the information is not available.

# Implementation specific change: Add authority for controlled vocabulary

---

- ▶ Record the name of the authoritative list used
- ▶ Expressed as a string or as a unique URI
  - ▶ <http://id.loc.gov/vocabulary/preservation/eventType>
  - ▶ UC San Diego Rights Basis Vocabulary
- ▶ Usable in semantic units that suggest use of controlled vocabularies under data constraint.
- ▶ Changes only to the XML schema
- ▶ complexType 'stringPlusAuthority' is xs:string with the three new attributes:
  - ▶ **authority**: name of a controlled vocabulary as a string
  - ▶ **authorityURI**: name of a controlled vocabulary as URI
  - ▶ **valueURI**: value from a controlled vocabulary that is in the form of a URI.
- ▶ Some controlled vocabularies as Linked Data at id.loc.gov:  
<http://id.loc.gov/vocabulary/preservation>

# Approved Changes: Make Intellectual Entity an Object category

V2:

- Assumed to be held in a container metadata schema
- No Intellectual Entity semantic units

Exception:

V3:

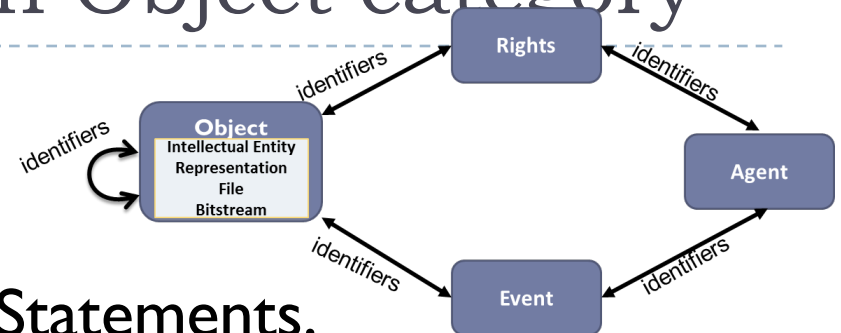

- Possibility to enable linking to a description of intellectual entities
- PREMIS Objects link to it
- Same semantic units as Representations

- A set of content that is considered a single intellectual unit for purposes of management and description
- For example, a particular book, map, photograph, or database.
- An Intellectual Entity can include other Intellectual Entities; for example, a Web site can include a Web page; a Web page can include an image.

# Approved Changes:

## Make Intellectual Entity an Object category

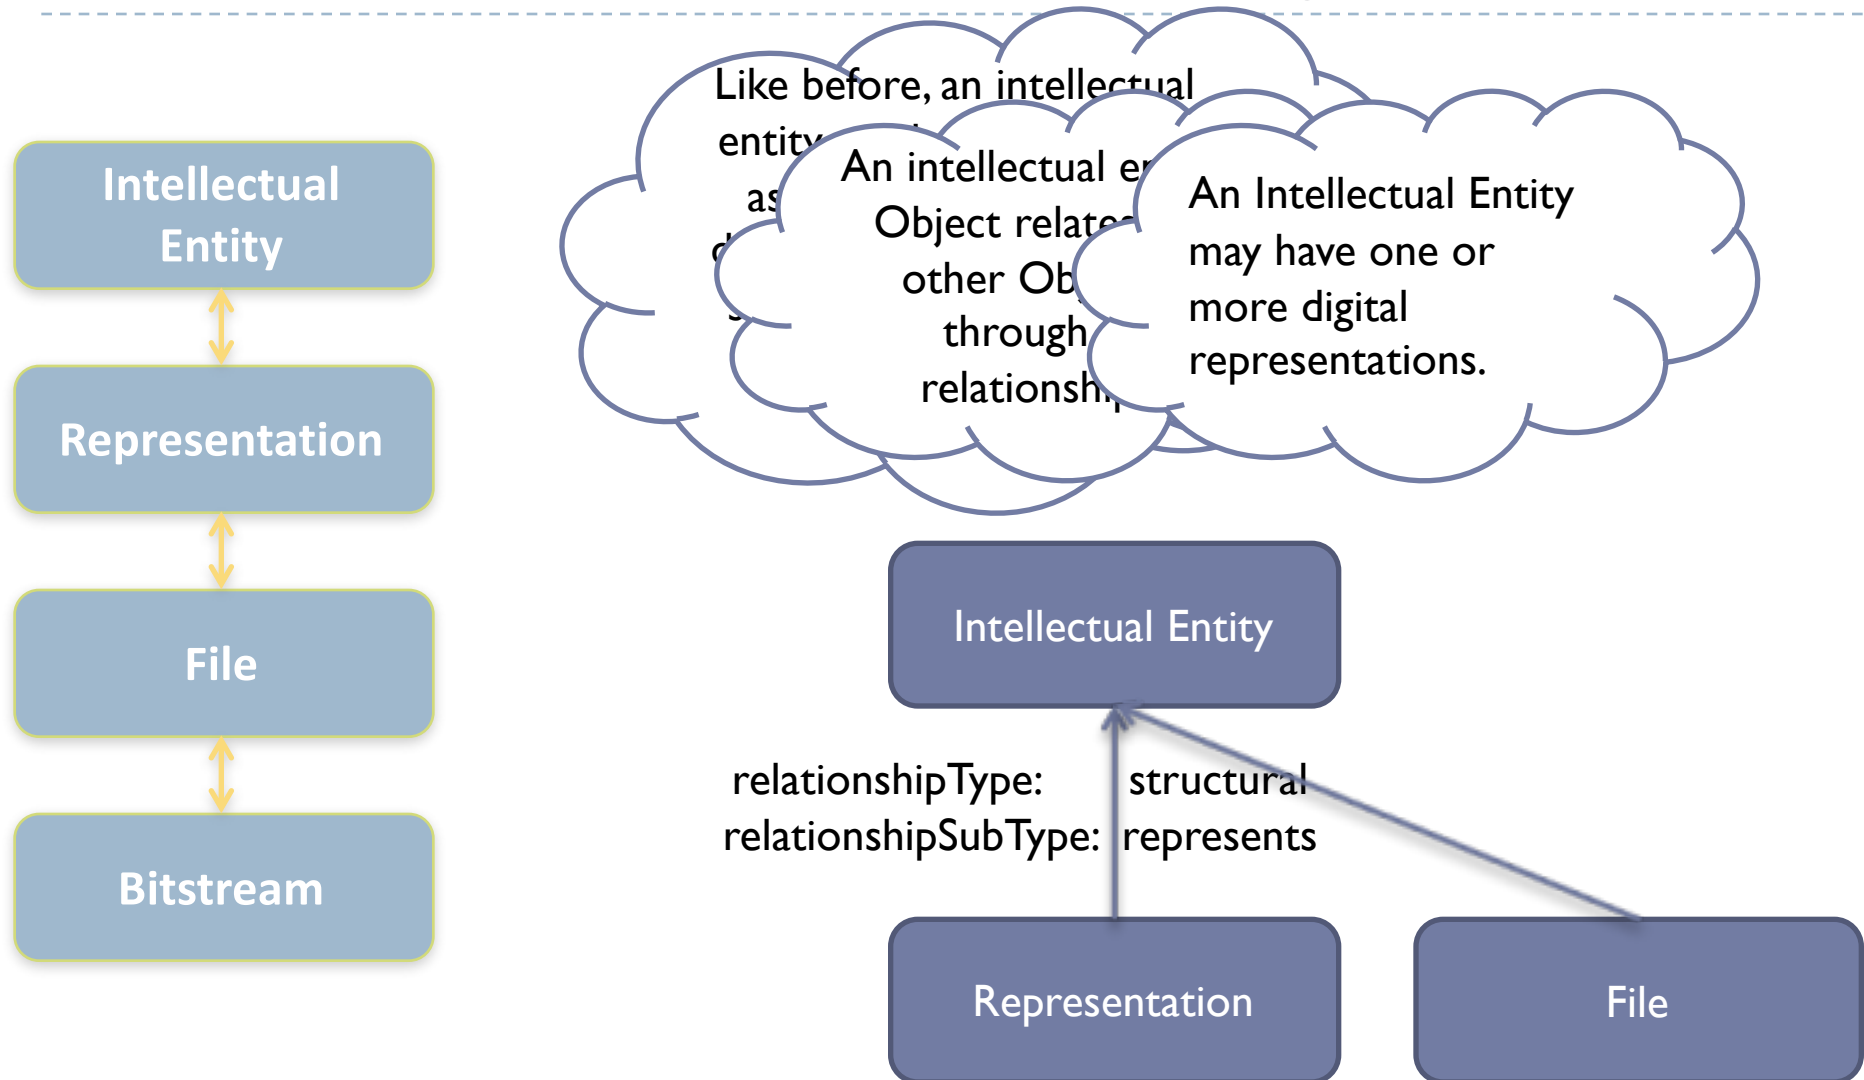

---

- ▶ Relate to PREMIS Events and RightsStatements.
- ▶ Support structural and derivative relationships with Objects.
- ▶ Represent an aggregate, such as a collection, FRBR work, FRBR expression, fonds or series.
- ▶ Capture versioning information and metadata update events at the Intellectual Entity level as core provenance preservation metadata
- ▶ Associate business requirements with them.
  - ▶ Significant characteristics, risk definitions, guidelines for preservation actions, etc..

# Approved Changes: Make Intellectual Entity an Object category

---

# Approved Changes: Make Environments independent Objects

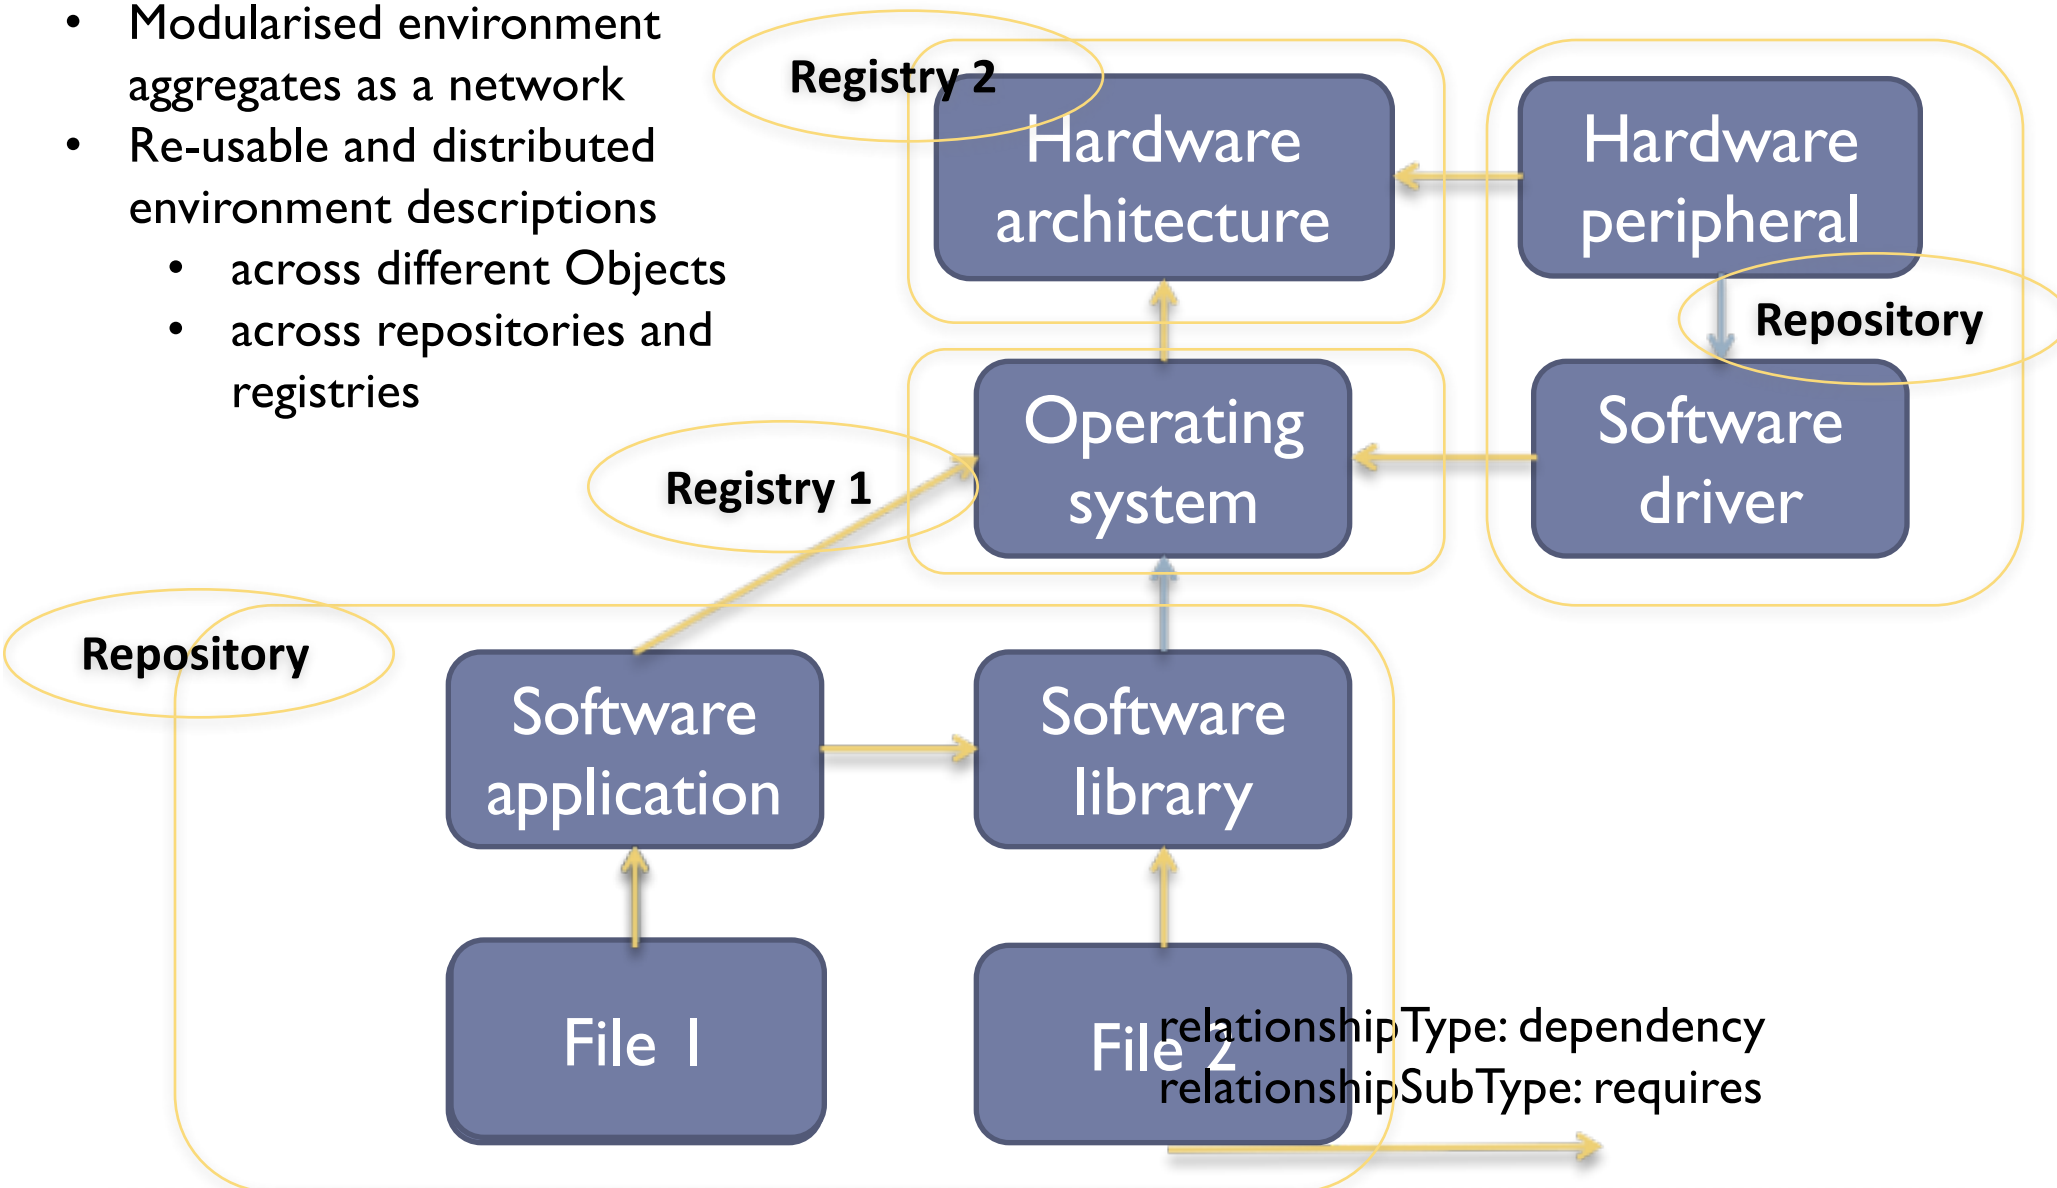

---

- ▶ What is needed to render or use an object
  - ▶ Operating system
  - ▶ Application software
  - ▶ Computing resources
- ▶ A high-level data model
- ▶ **No** detailed characteristics specific to an environment type
- ▶ A standardized way of treating environments
- ▶ Sharable and exchangeable

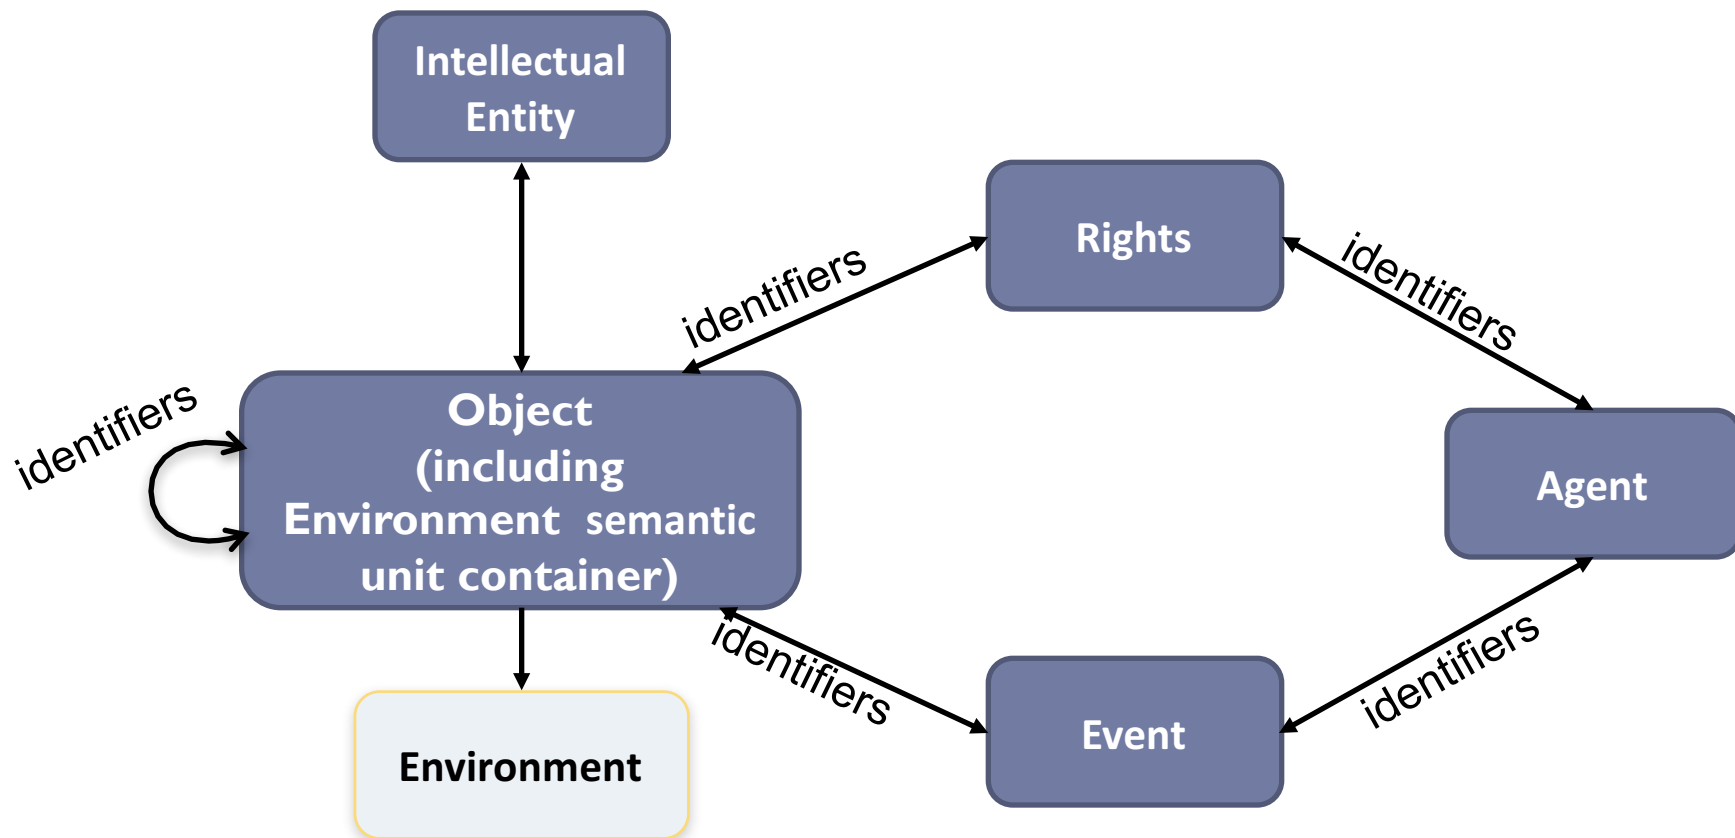

# Example: Environment stack and dependency relationships

- Modularised environment aggregates as a network
- Re-usable and distributed environment descriptions
  - across different Objects
  - across repositories and registries

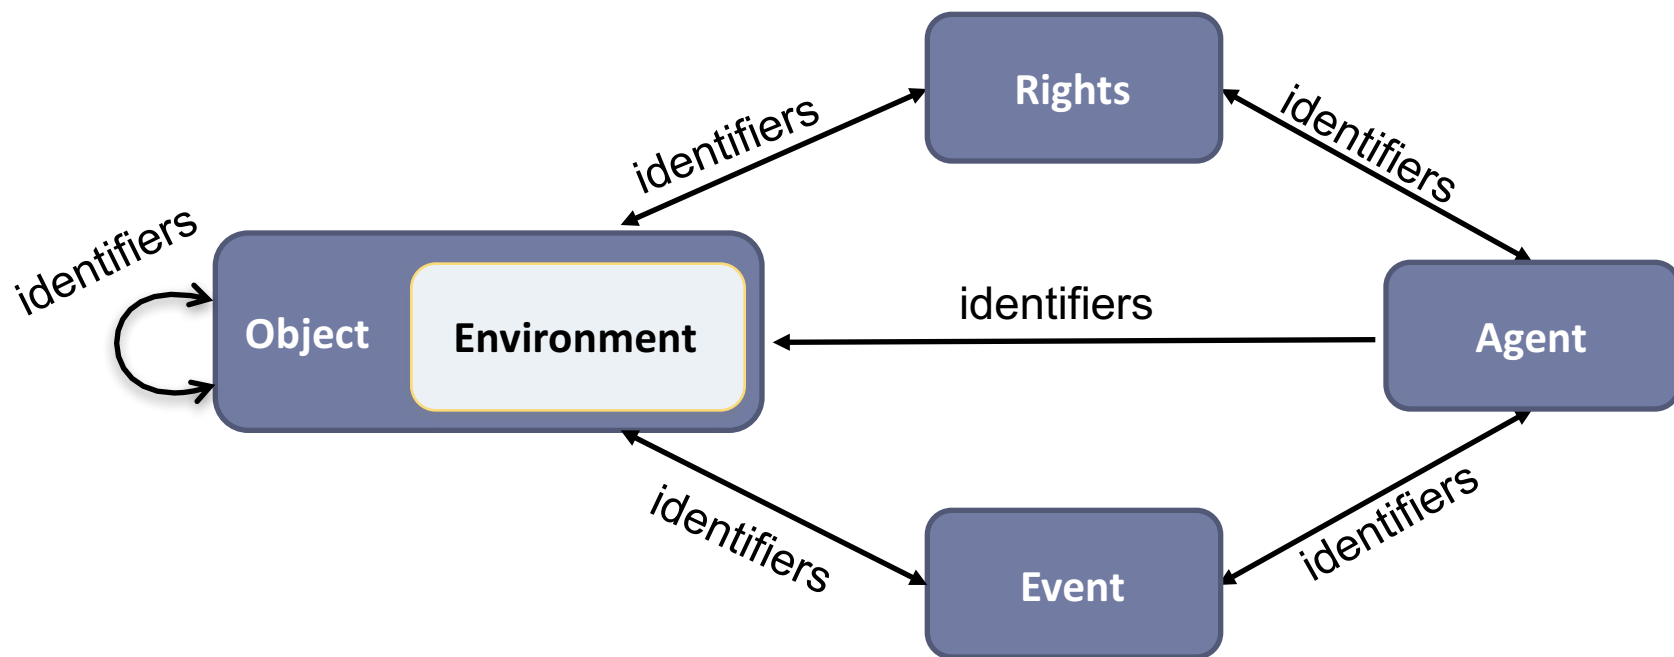

# Data Model in PREMIS V2

---

# Data Model in PREMIS V3

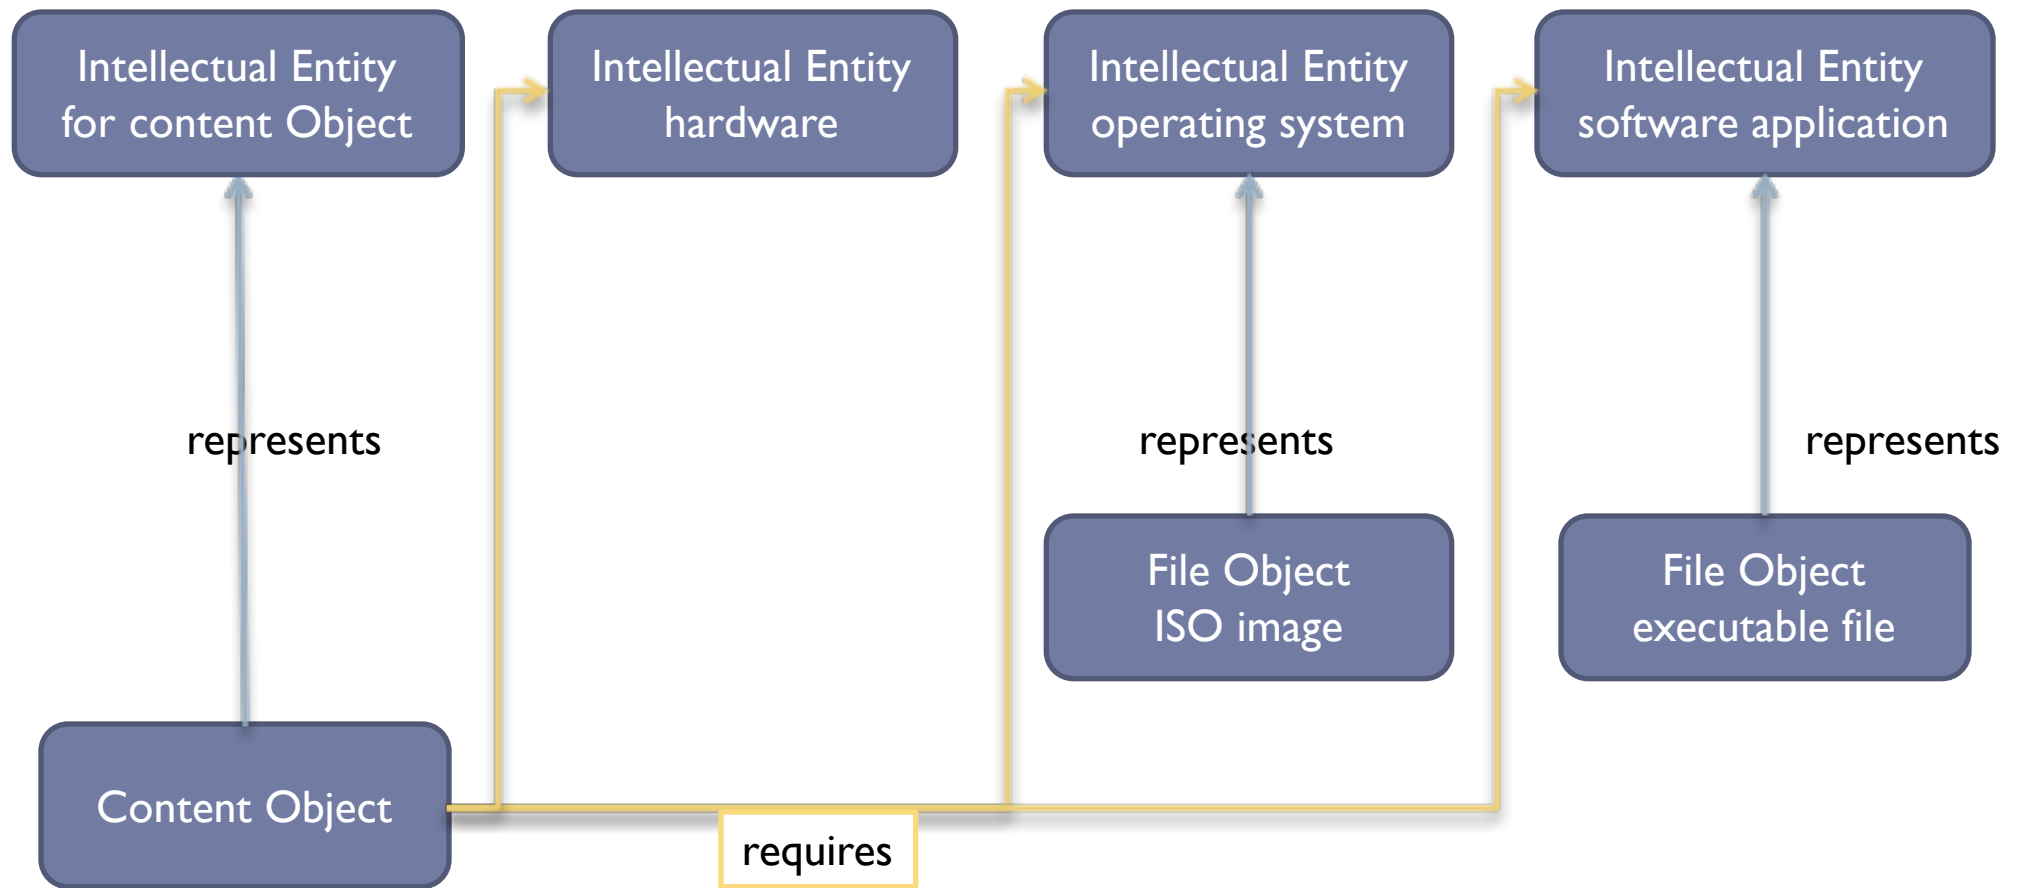

---

# Example:

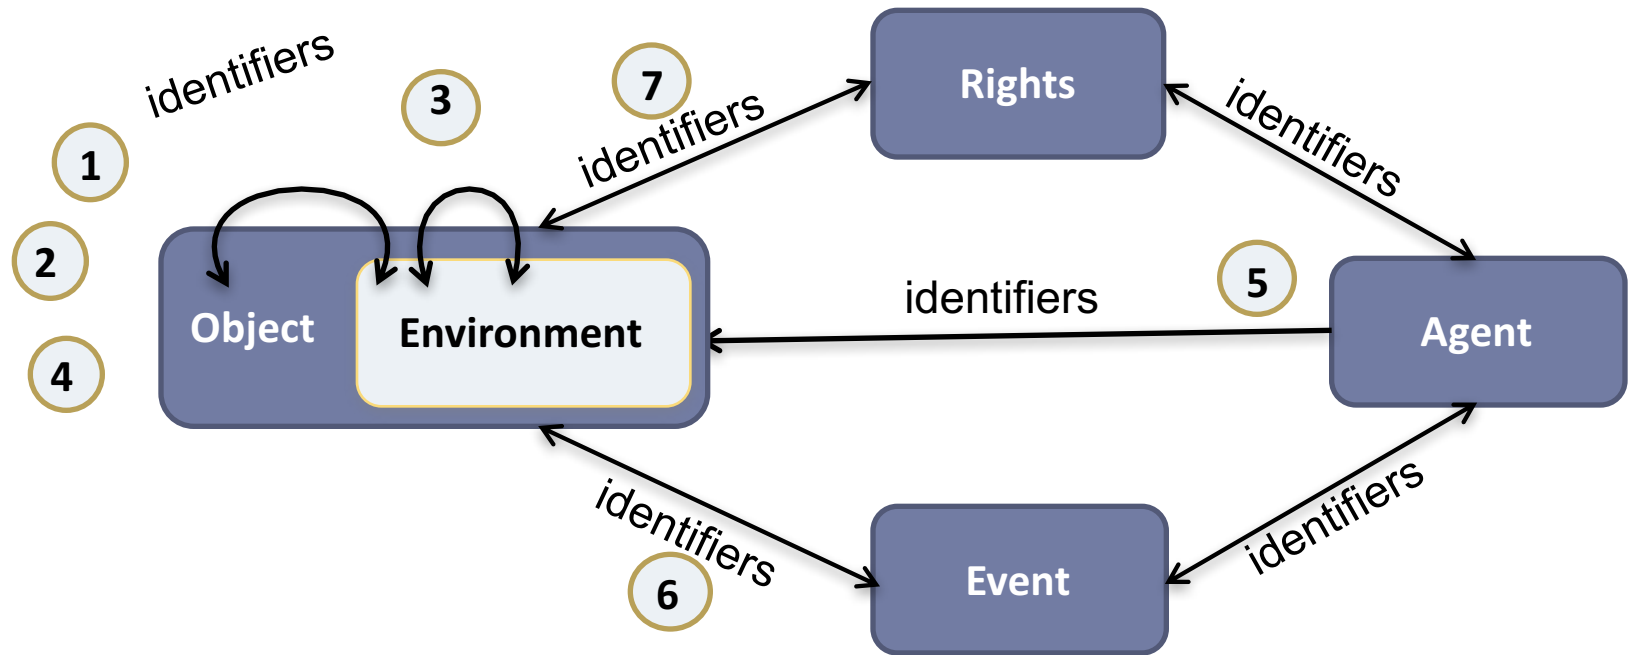

## An object and its rendering environment

---

represents =  
relationshipType: structural  
relationshipSubType: represents

requires =  
relationshipType: dependency  
relationshipSubType: requires

1. Object to environment - specify computational context
2. environment to Object - documentation, specifications, surrogates
3. environment to environment - inclusion, dependency, derivation, other
4. environment is an Object – preserved software source code
5. Agent to Environment - role of an Agent
6. environment to Event - environment specific Events (provenance)
7. environment to RightsStatement - software license, policy

“Object”: here a traditional content Object

# Expanded relationship types for environment Objects

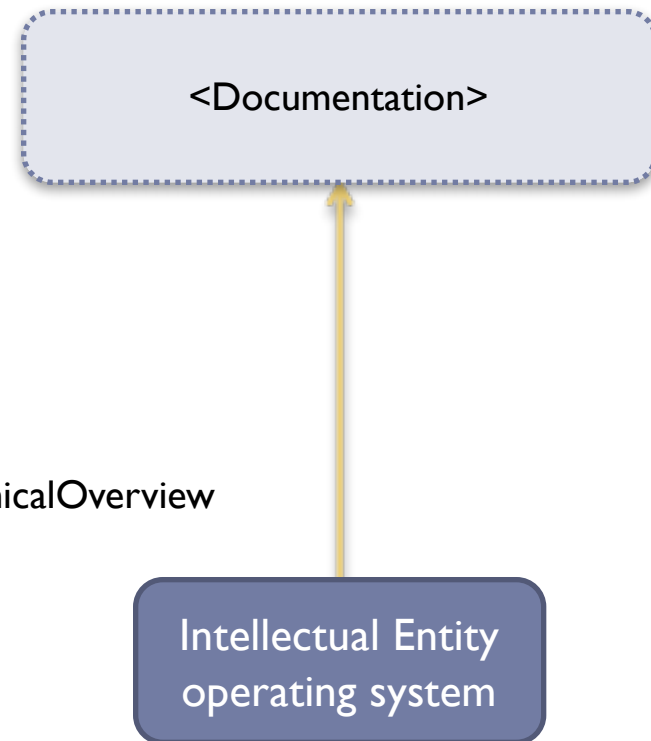

---

- ▶ **Dependency**
  - ▶ Requires, is required by
  - ▶ Is deployed on
- ▶ **Derivation**
  - ▶ Is source of, has source
- ▶ **Logical**
  - ▶ generalises,  
is generalised by
- ▶ **Reference**
  - ▶ Documents,  
is documented in
- ▶ **Replacements**
  - ▶ Supercedes,  
is superceded by
- ▶ **Structural**
  - ▶ Includes, is included in
  - ▶ Represents,  
is represented as

# Approved Changes:

## Make Environments independent Objects

---

- ▶ Environments: i.e. hardware and software needed to use digital objects
- ▶ Described and preserved reusing the Object entity,
- ▶ Described as Intellectual Entities, preserved as Representation, File or Bitstream.
- ▶ Semantic units that are specific to Environment descriptions
  - ▶ Capture the function and designation of the Environment,
  - ▶ Link to descriptions in external registries.
- ▶ Represented as
  - ▶ Aggregate environments or as
  - ▶ Individual components of an environment (e.g. an executable file, a stylesheet);
- ▶ Relationships become important.
- ▶ Direct relationship between Agents and Objects to capture the Environment that acted as the Agent in an Event.

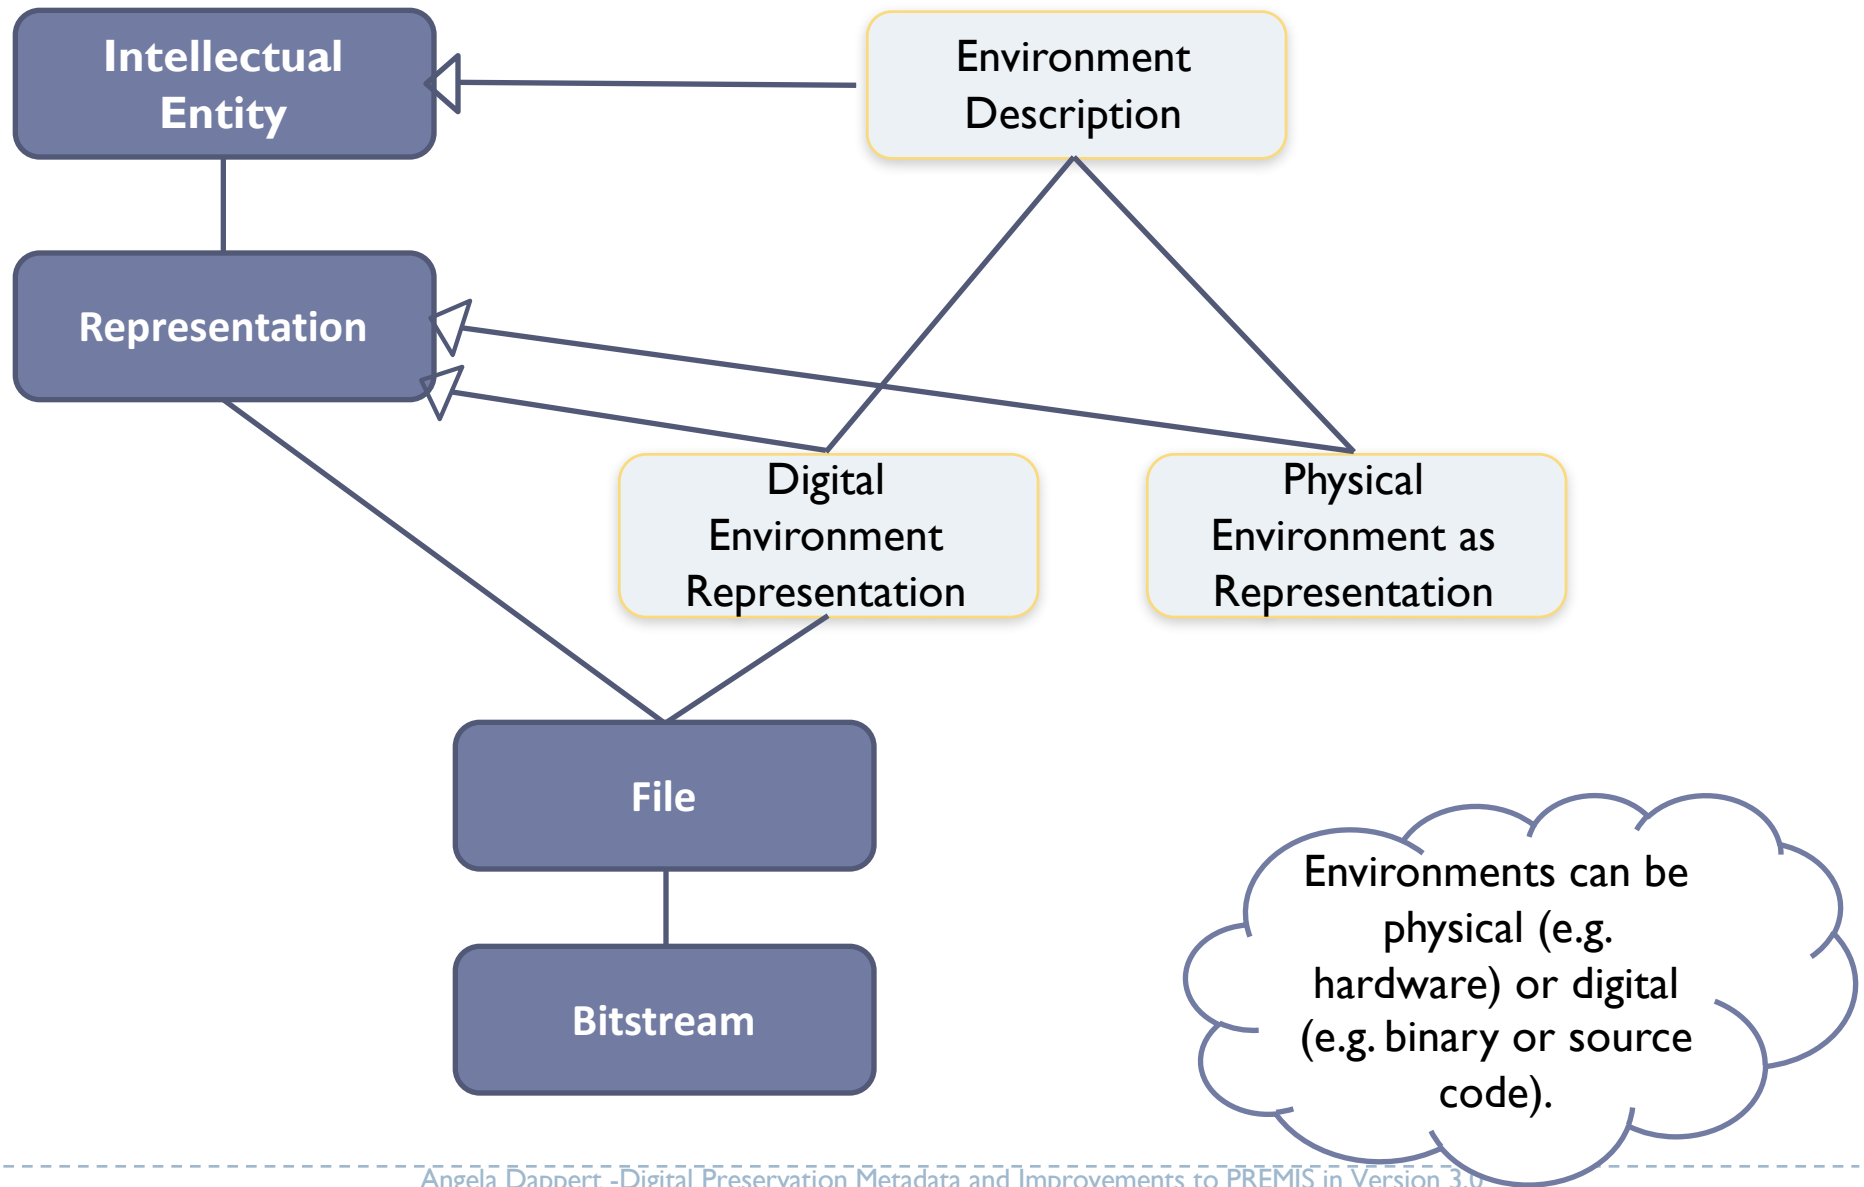

# Approved Changes: Add physical Objects

---

- ▶ A physical Object is
  - ▶ A content Object, such as a manuscript, or printed document
  - ▶ An environment Object, such as a physical hardware device.
- ▶ Representation: A digital or physical Object
- ▶ Either one instantiates or embodies an Intellectual Entity
- ▶ Digital and non-digital Objects can be captured uniformly.
- ▶ Physical Objects can relate to digital Objects and other physical Objects.
- ▶ *In V3 storage* is applicable to Representations. For physical Representations: the physical location, e.g. a shelf location.

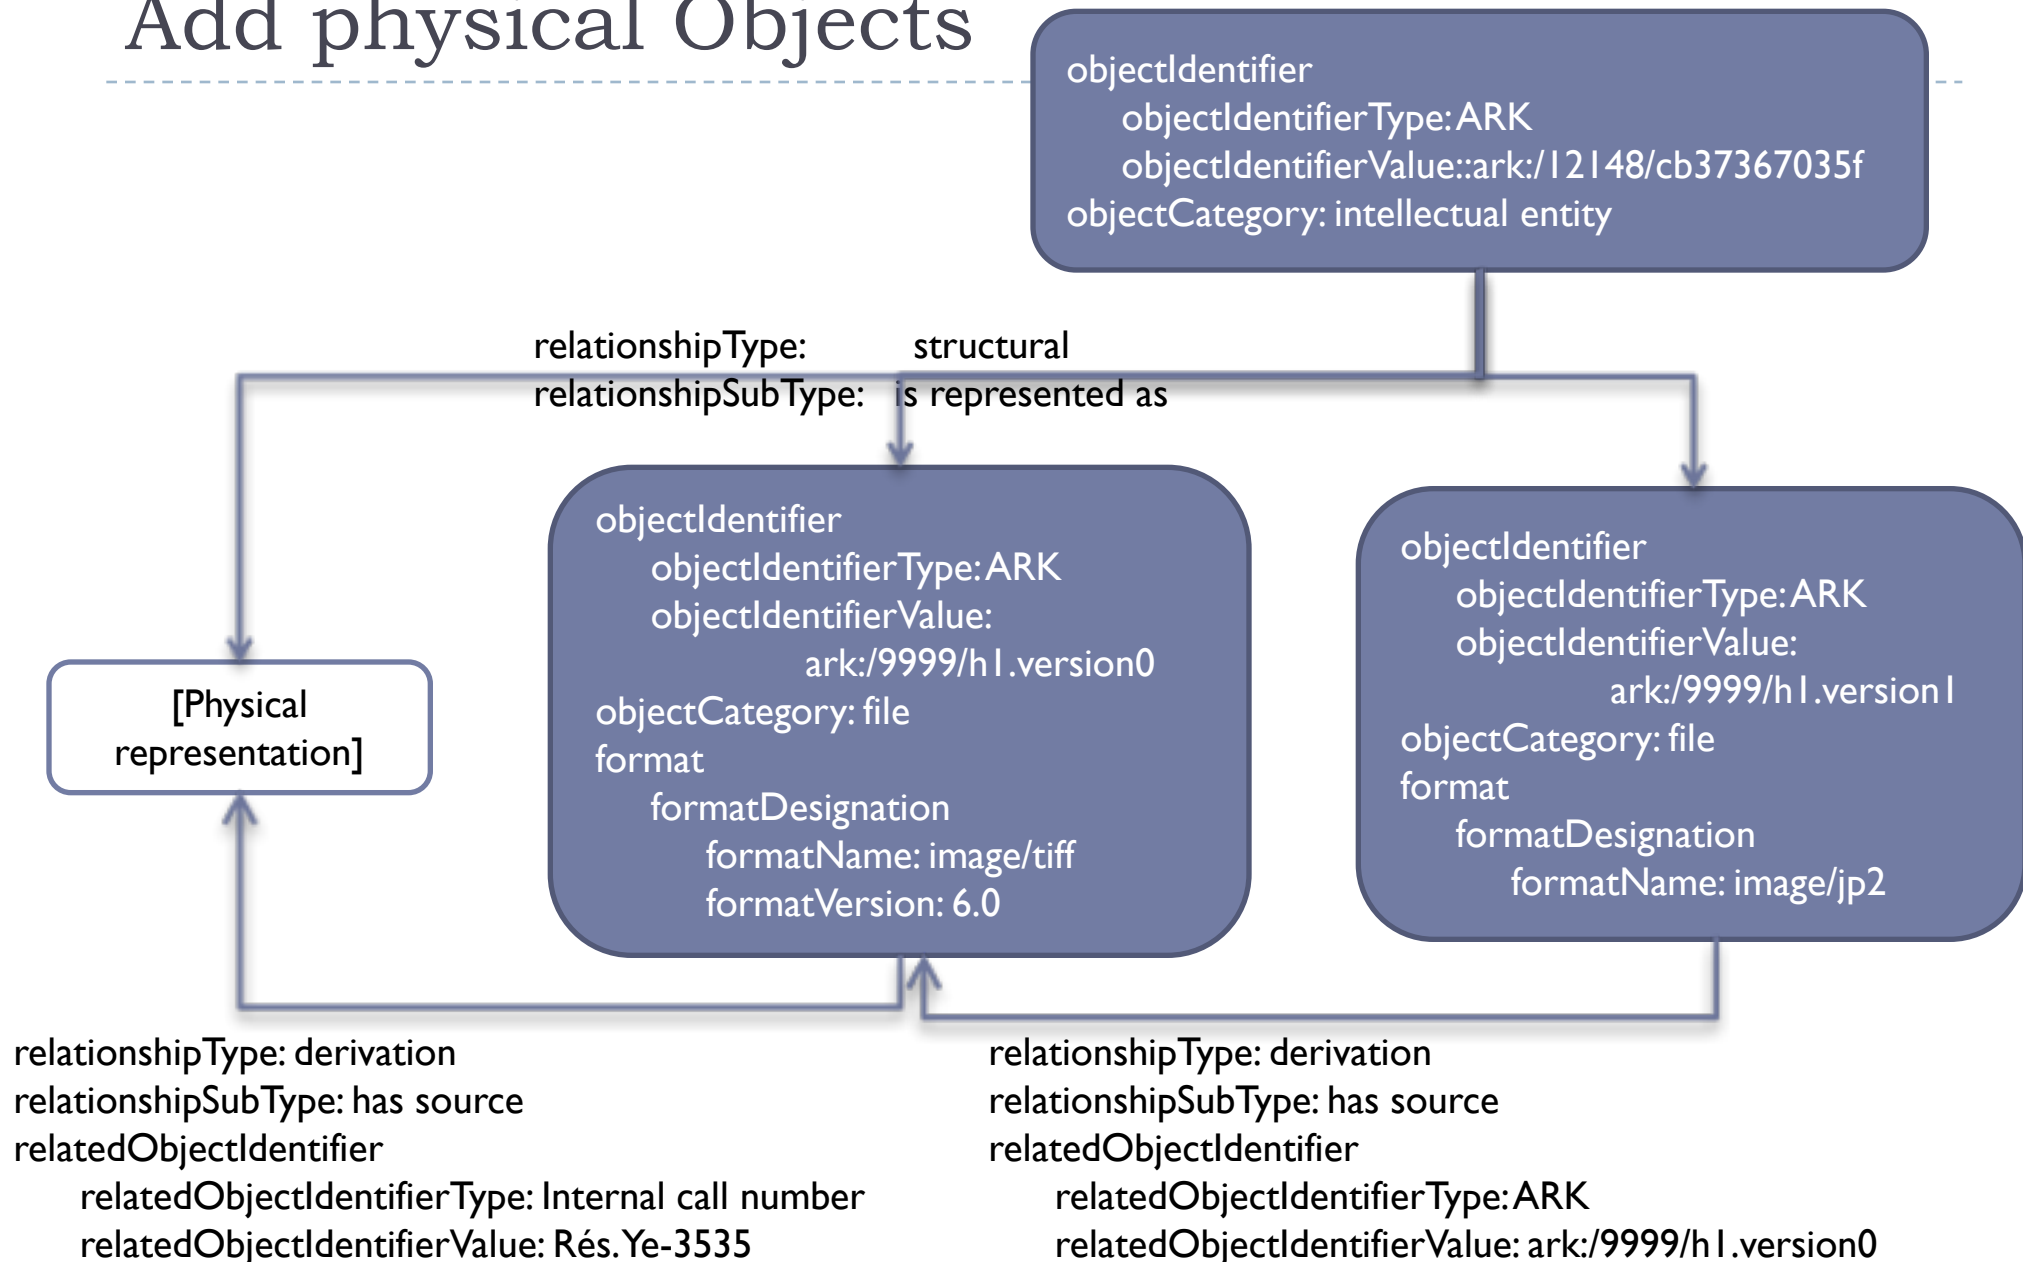

# Approved Changes: Add physical Objects

---

# Approved Changes: Add physical Objects

# Approved Changes: Update conformance statement
